

Week 1 — Data Quality Change Log

Prepared by: Muhammad Hammad Ateeq

Organization: DecodeLabs

Role: Data Analyst Intern

Period: Week 1 — Internship Commencement

Overview

This document records all data quality change requests (CRs) investigated, audited, and resolved during the first week of the Data Analyst Internship at DecodeLabs. Each entry outlines the nature of the change, its scope of impact, and its current resolution status. All five change requests have been successfully resolved.

5	5	506
Total Change Requests	Resolved	Records Impacted

Change Request Log

Change ID	Description	Impact	Status
CR001	Standardized TotalPrice to numeric precision of 2 decimals.	Corrected 197 records for currency consistency.	Resolved
CR002	Audited OrderDate for ISO 8601 (YYYY-MM-DD) compliance.	Verified 0% error rate; no transformation required.	Resolved
CR003	Performed Integrity Audit on OrderID primary keys.	Verified 0% duplicate rate; ensured unique identifiers.	Resolved
CR004	Audited categorical and alphanumeric columns for whitespace and casing.	Verified 0% error rate in names/addresses; confirmed IDs follow standard uppercase formats.	Resolved
CR005	Strategic Imputation for missing CouponCode values.	Preserved 309 records by replacing nulls with 'None'.	Resolved

Notes

All change requests for Week 1 have been fully resolved with zero outstanding items. Data integrity verifications (CR002, CR003, CR004) confirmed the dataset was already compliant in those dimensions, requiring no corrective transformation. Corrective actions were applied for CR001 (precision normalization) and CR005 (null imputation), collectively improving the quality of 506 records.
